

USING WALL TYPES (supplemental)

Pick Wall Type...

To Install the Pick Wall Type command, do the following:

1. Use a decompression program to "unstuff" the files in the supplemental feature file. This will create 3 files in a folder on your hard drive:
 - Using Wall Types (this .PDF file);
 - Pick Wall Type....VSM (the plug-in);
 - VectorWorks ARCHITECT+ (a workspace file);

Place the plug-in file in your Plug-ins folder inside your VectorWorks program folder, and the workspace file inside the Workspaces folder in the same directory.

2. Start VectorWorks and using the Workspaces submenu, choose the VectorWorks ARCHITECT+ workspace. You will have a new File menu command under the VA Preferences menu item called Pick Wall Type.

The Pick Wall Type... command displays a dialog similar to the Current Wall Types dialog where you can see a detailed description of your current wall types and pick the active wall type with a single click.

To pick the current wall type for the straight or curved Wall Type tool:

1. From the File Menu, select **VA Preferences** then **Pick Wall Type...** or type \ [backslash] holding down the Control or Command key.

The Pick Wall Type dialog appears.
